<b>15 - DIRECTORY NAVIGATION</b>	<b>9</b>
<b>16 - SECURITY</b>	<b>10</b>
<b>17 - LOGGING AND AUDITING</b>	<b>10</b>

# 1 - SYSTEM INFORMATION

<code>uname -a</code>	# Display Linux system information
<code>uname -r</code>	# Display kernel release information
<code>cat /etc/redhat-release</code>	# Show which version of Red Hat installed
<code>lsb_release -a</code>	# Show which version of Ubuntu installed
<code>uptime</code>	# Show how long the system has been running + load
<code>hostname</code>	# Show system host name
<code>hostname -I</code>	# Display all local IP addresses of the host
<code>last reboot</code>	# Show system reboot history
<code>date</code>	# Show the current date and time
<code>cal</code>	# Show this month's calendar
<code>w</code>	# Display who is online
<code>whoami</code>	# Who you are logged in as

# 2 - HARDWARE INFORMATION

<code>dmesg</code>	# Display messages in kernel ring buffer
<code>cat /proc/cpuinfo</code>	# Display CPU information
<code>cat /proc/meminfo</code>	# Display memory information
<code>free -h</code>	# Display free and used memory ( <code>-h</code> for human readable, <code>-m</code> for MB, <code>-g</code> for GB.)
<code>lspci -tv</code>	# Display PCI devices
<code>lsusb -tv</code>	# Display USB devices
<code>dmidecode</code>	# Display DMI/SMBIOS (hardware info) from the BIOS
<code>hdparm -i /dev/sda</code>	# Show info about disk sda
<code>hdparm -tT /dev/sda</code>	# Perform a read speed test on disk sda
<code>badblocks -s /dev/sda</code>	# Test for unreadable blocks on disk sda
<code>lshw</code>	# Display information about CPU, memory, storage, and network interfaces

lsblk

# Display information about all storage devices

### 3 - PERFORMANCE MONITORING AND STATISTICS

top

# Display and manage the top processes

htop

# Interactive process viewer (top alternative)

mpstat 1

# Display processor related statistics

vmstat 1

# Display virtual memory statistics

iostat 1

# Display I/O statistics

tail -100 /var/log/messages

# Display the last 100 syslog messages (Use /var/log/syslog for Debian based systems.)

tcpdump -i eth0

# Capture and display all packets on interface eth0

tcpdump -i eth0 'port 80'

# Monitor all traffic on port 80 ( HTTP )

lsof

# List all open files on the system

lsof -u user

# List files opened by user

free -h

# Display free and used memory ( -h for human readable, -m for MB, -g for GB.)

watch df -h

# Execute "df -h", showing periodic updates

mpstat

# Display statistics about CPU usage

pidstat

# Display statistics about processes running

### 4 - USER INFORMATION AND MANAGEMENT

id

# Display the user and group ids of your current user.

last

# Display the last users who have logged onto the system.

who

# Show who is logged into the system.

w

# Show who is logged in and what they are doing.

groupadd test

# Create a group named "test".

useradd -c "John Smith" -m john

# Create an account named john, with a

comment of "John Smith" and create the user's home directory.	
<code>userdel john</code>	<code># Delete the john account.</code>
<code>usermod -aG sales john</code>	<code># Add the john account to the sales group</code>

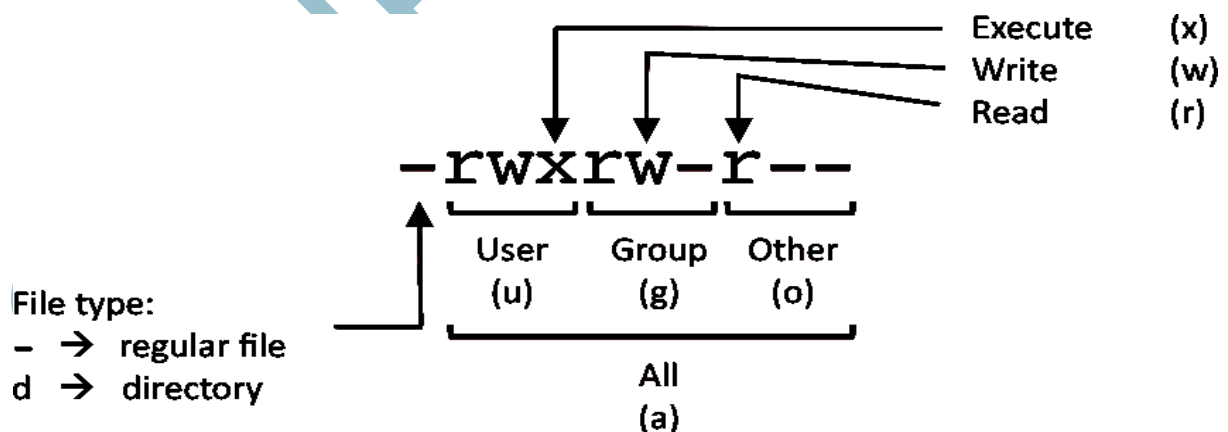

## 5 - FILE AND DIRECTORY COMMANDS

<code>ls -al</code>	<code># List all files in a long listing (detailed) format</code>
<code>pwd</code>	<code># Display the present working directory</code>
<code>mkdir directory</code>	<code># Create a directory</code>
<code>rm file</code>	<code># Remove (delete) file</code>
<code>rm -r directory</code>	<code># Remove the directory and its contents recursively</code>
<code>rm -f file</code>	<code># Force removal of file without prompting for confirmation</code>
<code>rm -rf directory</code>	<code># Forcefully remove directory recursively</code>
<code>cp file1 file2</code>	<code># Copy file1 to file2</code>
<code>cp -r source_directory destination</code>	<code># Copy source_directory recursively to destination. If destination exists, copy source_directory into destination, otherwise create destination with the contents of source_directory.</code>
<code>mv file1 file2</code>	<code># Rename or move file1 to file2. If file2 is an existing directory, move file1 into directory file2</code>
<code>ln -s /path/to/file linkname</code>	<code># Create symbolic link to linkname</code>
<code>touch file</code>	<code># Create an empty file or update the access and modification times of file.</code>
<code>cat file</code>	<code># View the contents of file</code>
<code>less file</code>	<code># Browse through a text file</code>
<code>head file</code>	<code># Display the first 10 lines of file</code>
<code>tail file</code>	<code># Display the last 10 lines of file</code>
<code>tail -f file</code>	<code># Display the last 10 lines of file and "follow" the file as it grows.</code>

## 6 - PROCESS MANAGEMENT

<code>ps</code>	# Display your currently running processes
<code>ps -ef</code>	# Display all the currently running processes on the system.
<code>ps -ef   grep processname</code>	# Display process information for <code>processname</code>
<code>top</code>	# Display and manage the top processes
<code>htop</code>	# Interactive process viewer (top alternative)
<code>kill pid</code>	# Kill process with process ID of <code>pid</code>
<code>killall processname</code>	# Kill all processes named <code>processname</code>
<code>program &amp;</code>	# Start <code>program</code> in the background
<code>bg</code>	# Display stopped or background jobs
<code>fg</code>	# Brings the most recent background job to foreground
<code>fg n</code>	# Brings job <code>n</code> to the foreground
<code>nohup processname</code>	# Runs a process even after user logs out

## 7 - FILE PERMISSIONS

PERMISSION	EXAMPLE
U G W	
rw- rw- rw-	<code>chmod 777 filename</code> # Use sparingly!
rw- rw- r-x	<code>chmod 775 filename</code>
rw- r-x r-x	<code>chmod 755 filename</code>
rw- rw- r--	<code>chmod 664 filename</code>

rw- r-- r--      chmod 644 filename

#### LEGEND

U = User  
G = Group  
W = World

r = Read  
w = write  
x = execute  
- = no access

chown john /path/to/file

# Change ownership of /path/to/file to john

chgrp sales /path/to/file

# Change group ownership of /path/to/file to group sales

## 8 - NETWORKING

ip a

# Display all network interfaces and IP address

ip addr show dev eth0

# Display eth0 address and details

ethtool eth0

# Query or control network driver and hardware settings

ping host

# Send ICMP echo request to host

whois domain

# Display whois information for domain

dig domain

# Display DNS information for domain

dig -x IP\_ADDRESS

# Reverse lookup of IP\_ADDRESS

host domain

# Display DNS IP address for domain

hostname -i

# Display the network address of the host name.

hostname -I

# Display all local IP addresses of the host.

wget http://domain.com/file

# Download http://domain.com/file

netstat -nutlp

# Display listening tcp and udp ports and corresponding programs

<code>ifconfig</code>	<code># Display information about network interfaces</code>
<code>traceroute host</code>	<code># Display the path that packets take to host</code>
<code>tcpdump</code>	<code># Capture and analyze network traffic</code>

## 9 - ARCHIVES (TAR FILES)

<code>tar cf archive.tar directory</code>	<code># Create tar named archive.tar containing directory.</code>
<code>tar xf archive.tar</code>	<code># Extract the contents from archive.tar.</code>
<code>tar czf archive.tar.gz directory</code>	<code># Create a gzip compressed tar file name archive.tar.gz.</code>
<code>tar xzf archive.tar.gz</code>	<code># Extract a gzip compressed tar file.</code>
<code>tar cjf archive.tar.bz2 directory</code>	<code># Create a tar file with bzip2 compression</code>
<code>tar xjf archive.tar.bz2</code>	<code># Extract a bzip2 compressed tar file.</code>

## 10 - INSTALLING PACKAGES

<code>yum search keyword</code>	<code># Search for a package by keyword.</code>
<code>yum install package</code>	<code># Install package.</code>
<code>yum info package</code>	<code># Display description and summary information about package for RHEL based systems.</code>
<code>rpm -i package.rpm</code>	<code># Install package from local file named package.rpm</code>
<code>yum remove package</code>	<code># Remove/uninstall package for RHEL based systems.</code>
<code>yum update package</code>	<code># Update package with name package for RHEL based systems.</code>
<code>tar zxvf sourcecode.tar.gz</code> <code>cd sourcecode</code> <code>./configure</code> <code>make</code> <code>make install</code>	<code># Install software from source code.</code>

<code>apt-get update</code>	# Update package list for Debian based systems.
<code>apt-get upgrade</code>	# Upgrade all installed packages to their newest version for Debian based systems.
<code>apt-get install package</code>	# Install package with name <code>package</code> for Debian based systems.
<code>apt-remove package</code>	# Remove package with name <code>package</code> for Debian based systems.

## 11 - SEARCH

<code>grep pattern file</code>	# Search for <code>pattern</code> in <code>file</code>
<code>grep -r pattern directory</code>	# Search recursively for <code>pattern</code> in <code>directory</code>
<code>locate name</code>	# Find files and directories by name
<code>find /home/john -name 'prefix*'</code>	# Find files in <code>/home/john</code> that start with "prefix".
<code>find /home -size +100M</code>	# Find files larger than 100MB in <code>/home</code>
<code>whereis program</code>	# Display the location of the binary, source and manual page files of <code>program</code> .
<code>which program</code>	# Display the path of executable that would run if <code>program</code> is executed.

## 12 - SSH LOGINS

<code>ssh host</code>	# Connect to <code>host</code> as your local username.
<code>ssh user@host</code>	# Connect to <code>host</code> as <code>user</code>
<code>ssh -p port user@host</code>	# Connect to <code>host</code> using <code>port</code>
<code>ssh-keygen</code>	# Create a new SSH key pair.
<code>ssh-copy-id user@host</code>	# Copy SSH key to the <code>remote</code> host to enable passwordless logins for <code>user</code> .

## 13 - FILE TRANSFERS

<code>scp file.txt server:/tmp</code>	# Secure copy <code>file.txt</code> to the <code>/tmp</code> folder on <code>server</code>
<code>scp server:/var/www/*.html /tmp</code>	# Copy <code>*.html</code> files from <code>server</code> to the local <code>/tmp</code> folder.
<code>scp -r server:/var/www /tmp</code>	# Copy all files and directories recursively from <code>server</code> to the current system's <code>/tmp</code> folder.
<code>rsync -a /home /backups/</code>	# Synchronize <code>/home</code> to <code>/backups/home</code>
<code>rsync -avz /home server:/backups/</code>	# Synchronize files/directories between the local and remote system with compression enabled
<code>ftp host</code>	# Connect to FTP server on the remote <code>host</code> .

## 14 - DISK USAGE

<code>df -h</code>	# Show free and used space on mounted filesystems
<code>df -i</code>	# Show free and used inodes on mounted filesystems
<code>fdisk -l</code>	# Display disks partitions sizes and types
<code>du -ah</code>	# Display disk usage for all files and directories in human readable format
<code>du -sh</code>	# Display total disk usage off the current directory
<code>du -a directory</code>	# Display size of all files in <code>directory</code> .
<code>findmnt</code>	# List all mounted file systems with details.

## 15 - DIRECTORY NAVIGATION

<code>cd ..</code>	# To go up one level of the directory tree. (Change into the parent directory.)
<code>cd</code>	# Go to the <code>\$HOME</code> directory
<code>cd /etc</code>	# Change to the <code>/etc</code> directory
<code>alias goto='cd /etc/'</code>	# Create <code>goto</code> alias for command <code>cd /etc/</code> .

## 16 - SECURITY

<code>passwd</code>	# Change the current user's password.
<code>sudo -i</code>	# Switch to the root account with root's environment. (Login shell.)
<code>sudo -s</code>	# Execute your current shell as root. (Non-login shell.)
<code>sudo -l</code>	# List sudo privileges for the current user.
<code>visudo</code>	# Edit the sudoers configuration file.
<code>getenforce</code>	# Display the current SELinux mode.
<code>sestatus</code>	# Display SELinux details such as the current SELinux mode, the configured mode, and the loaded policy.
<code>setenforce 0</code>	# Change the current SELinux mode to Permissive. (Does not survive a reboot.)
<code>setenforce 1</code>	# Change the current SELinux mode to Enforcing. (Does not survive a reboot.)
<code>SELINUX=enforcing</code>	# Set the SELinux mode to enforcing on boot by using this setting in the <code>/etc/selinux/config</code> file.
<code>SELINUX=permissive</code>	# Set the SELinux mode to permissive on boot by using this setting in the <code>/etc/selinux/config</code> file.
<code>SELINUX=disabled</code>	# Set the SELinux mode to disabled on boot by using this setting in the <code>/etc/selinux/config</code> file.

## 17 - LOGGING AND AUDITING

<code>dmesg</code>	# Display messages in kernel ring buffer.
<code>journalctl</code>	# Display logs stored in the systemd journal.
<code>journalctl -u servicename</code>	# Display logs for a specific unit (service).
